

Ajay Singh

AI Engineer | LLM & Agentic Systems

📍 Thane, Maharashtra (Open to Relocate) ✉ ajaysdoriyal@gmail.com ☎ +91 7906172359 🐙 GitHub 🔗 LinkedIn

SUMMARY

AI engineer with hands-on experience building agentic LLM workflows, RAG-based recommendations, and multi-model AI applications, backed by production Python/FastAPI and Node.js backend experience from SaaS systems built for real clients and customers.

EXPERIENCE

AI Engineer, ConversAI Labs (Remote)

Aug 2026 – Sep 2026

- Worked on an **agentic LLM workflow-refinement system** for a conversational agent platform: an agent that inspects existing workflows, clarifies requirements, applies changes from natural-language requests, and verifies the result.
- Used **LLM tool calling** so the agent could inspect workflows, test behavior, access configuration and knowledge-base context, and apply workflow updates, using conversation history, workflow state, and user requests as inputs.
- Improved reliability of workflow changes by handling scope, conflicts, and preservation requirements, with final verification so unrelated conversational behavior was not broken; investigated failures such as incorrect edits, repeated reasoning, and unnecessary tool calls.
- Worked on **agent evaluation** based on required, forbidden, and preserved behaviors and expected workflow structure; applied **context and prompt optimization**, read caching, smaller tool responses, and targeted updates, balancing quality against iteration limits, token usage, latency, and cost.
- Built **Python/FastAPI** backend features for the company's self-serve SaaS platform: authentication, onboarding, plan purchase, mobile-number purchase, payments, and GST-aware invoice generation with PDF output.

Software Engineer, Metamind Studio (On-site)

Jul 2025 – Aug 2026

- Built a **RAG-based recommendation engine** using vector search and semantic retrieval, alongside geospatial search and interactive maps for location-based destination discovery.
- Built and launched a **CA marketplace platform to production in under 2 months**, working directly with clients on requirements; also contributed to multiple other SaaS products.
- Owned backend design for a multi-role campaign platform: database schemas, JWT/RBAC authentication, wallet management, and **50+ REST APIs**; automated social-data sync, payouts, and notifications through third-party API integrations and Redis-backed background workers.
- Reduced critical API response times from **500ms+ to under 20ms** through MongoDB Atlas Search, query optimization, API restructuring, and SSR/SSG rendering; **mentored 2–4 interns** across projects.

Frontend Developer Intern, Support Foundation (Remote)

Jan 2025 – Mar 2025

- Built frontend features for a DevOps Learning Management System in a 4-member Agile team; migrated a legacy WordPress platform to React.js, improving performance through refactoring and lazy loading.

PROJECTS

AI-HubX: Conversational AI Platform | [Live Demo](#) | [Code](#)

- Built a conversational AI platform integrating **7 third-party AI models** for chat, image, and code generation.
- Added real-time model interaction over Socket.io, improving response speed and overall performance by **80%**; containerized with Docker for local and production deployment. (*MERN, JWT, Bcrypt, Helmet*)

SKILLS

AI / LLM	LLMs, Agentic Systems, Tool Calling, RAG, Vector Search, Semantic Retrieval, LLM Evaluation, Prompt/Context Optimization
Languages	Python, JavaScript, TypeScript, Java, SQL
Backend	FastAPI, Node.js, NestJS, Express.js, REST APIs, Authentication (JWT, RBAC), Background Processing, Socket.io
Databases	PostgreSQL, MongoDB (Atlas Search), Redis
Frontend	React.js, Next.js, Tailwind CSS
Cloud & DevOps	AWS (S3, EC2), Docker, Nginx, Linux, Vercel, Railway, Git/GitHub

EDUCATION

B.Sc. Computer Science, V.K. Krishna Menon College, Mumbai University | CGPA: 7.89

2025
