SUMMARY

Software engineer with production experience building SaaS platforms, REST APIs, and automation workflows for real clients, using Node.js/NestJS and Python/FastAPI. Recent hands-on experience with agentic LLM systems and RAG adds an AI dimension to a backend-focused skill set.

EXPERIENCE

AI Engineer, ConversAI Labs (Remote) **Aug 2026 – Sep 2026**

- Built **Python/FastAPI** backend features for a self-serve SaaS platform: authentication, company onboarding, plan and subscription management, mobile-number purchase, and payment/billing workflows tying purchases to companies, plans, and credits.
- Implemented purchase **invoice generation** with billing details, invoice numbering, GST handling, and PDF output, completing the flow from sign-up to plan purchase, payment, and invoice.
- Worked on an **agentic LLM workflow-refinement system** that inspects, modifies, and verifies conversational workflows through tool calling; improved efficiency with context optimization, read caching, and fewer redundant tool calls.

Software Engineer, Metamind Studio (On-site) **Jul 2025 – Aug 2026**

- Built and launched a **CA marketplace platform to production in under 2 months**, working directly with clients to turn business requirements into technical designs; contributed to multiple other SaaS products.
- Owned backend design for a multi-role campaign platform: database schemas, JWT/RBAC authentication, wallet management, and **50+ REST APIs** serving Brands, Agencies, Influencers, and End Users.
- Automated creator onboarding, analytics sync, content verification, payouts, and notifications by integrating the Facebook, Instagram, YouTube, and Google Drive APIs with cron schedulers and Redis-backed background workers.
- Reduced critical API response times from **500ms+ to under 20ms** through MongoDB Atlas Search, query optimization, API restructuring, and SSR/SSG rendering.
- Built geospatial search with interactive maps for destination discovery, plus a RAG-based recommendation engine using vector search and semantic retrieval.
- Deployed to production across Vercel, Railway, and a Hostinger VPS (Docker, Nginx, SSL) and **mentored 2–4 interns** across projects.

Frontend Developer Intern, Support Foundation (Remote) **Jan 2025 – Mar 2025**

- Built frontend features for a DevOps Learning Management System in a 4-member Agile team; migrated a legacy WordPress platform to React.js, improving performance through refactoring and lazy loading.

PROJECTS

AI-HubX: Conversational AI Platform | [Live Demo](#) | [Code](#)

- Built a conversational AI platform integrating **7 third-party AI models**, with real-time interaction over Socket.io that improved response speed and overall performance by **80%**.
- Containerized with Docker for consistent local development and production deployment. (*MERN, JWT, Bcrypt, Helmet*)

SKILLS

Languages	Python, JavaScript, TypeScript, Java, SQL
Backend	FastAPI, Node.js, NestJS, Express.js, REST APIs, Authentication (JWT, RBAC), Background Processing, Socket.io
Databases	PostgreSQL, MongoDB (Atlas Search), Redis
Frontend	React.js, Next.js, Tailwind CSS
Cloud & DevOps	AWS (S3, EC2), Docker, Nginx, Linux, Vercel, Railway, Git/GitHub
Integrations	Facebook Graph API, Instagram API, YouTube Data API, Google Drive API
AI / LLM	LLMs, Agentic Systems, Tool Calling, RAG, Vector Search, LLM Evaluation

EDUCATION

B.Sc. Computer Science, V.K. Krishna Menon College, Mumbai University | CGPA: 7.89

2025
